On Enabling Fast and Secure Access to Herbarium Specimen Images

[methods](#) / [results](#) / [conclusion](#) / [discussion](#)

This experimental data paper describes a method to facilitate fast and secure use of Botanical Research Institute Texas (BRIT) records and associated images:

Botanical Research Institute Texas (BRIT): Origins of BRIT collection records and associated images tracked in period 2022-06/2022-07.

hash://sha256/76d40abccfc71bc2cdaf4ea4a6003b9ac49123b27abe9f0d81e233299baf5e94 <https://github.com/bio-guoda/preston-brit-2022>

<https://linker.bio/hash://sha256/76d40abccfc71bc2cdaf4ea4a6003b9ac49123b27abe9f0d81e233299baf5e94>

 .xml .

Methods

[Preston](#) v0.3.9 was used to index 825,877 image urls published across three BRIT related to DwC-A records using:

```
# lists image urls after tracking dwca archives
preston track https://sernecportal.org/portal/content/dwca/VDB_DwC-A.zip\
https://sernecportal.org/portal/content/dwca/NLU_DwC-A.zip\
https://portal.torcherbaria.org/portal/content/dwca/BRIT_DwC-A.zip\
| preston dwc-stream\
| grep URI\
| jq --raw-output '["http://rs.tdwg.org/ac/terms/accessURI" | "http://rs.td
| gzip\
> image-urls.tsv.gz
# list image urls and track them
cat image-urls.tsv.gz | gunzip | xargs -L25 preston track
```

The tracked image urls were retrieved using a server in a data center in Germany on a ~1Gb connection .

```
preston history | head -n1 | preston cat | grep -o -P "2022-[0-9]{2}-[0-9]{2}T.*Z" | sort | uniq | head -n1  
2022-06-06T17:02:10.924Z
```

and ended at:

```
$ preston history --data-dir $PWD | tail -n1 | preston cat --data-dir $PWD  
| grep -o -P "2022-[0-9]{2}-[0-9]{2}T.*Z" | sort | uniq | head -n1  
2022-07-26T16:47:05.428Z
```

so took about 1 month and 20 days at about 0.2 images/s or 1 image per 5 seconds.

Results

Example Image

An example of a tracked image shown below was extraced using:

```
$ preston ls -l tsv\  
| grep hasVersion\  
| grep -v "well-known\  
| grep -v "zip\  
| head -n1  
https://bisque.cyverse.org/image_service/image/00-  
Bu6svkTKkNx5hdB8niSokV/resize:1250/format:jpeg  
http://purl.org/pav/hasVersion  
hash://sha256/a3e5efdcd9905154afea689e7e3c2756521d51265378118a66027c77eba35e0  
urn:uuid:063c8cb0-b0b7-469e-a9b8-65e99803ad54  
$ preston cat --remote https://linker.bio  
hash://sha256/a3e5efdcd9905154afea689e7e3c2756521d51265378118a66027c77eba35e0  
> BRIT67501.jpg
```

with caption generated using:

```
$ preston ls\
| grep hasVersion\
| grep zip\
| preston dwc-stream\
| grep "https://bisque.cyverse.org/image_service/image/00-Bu6svkTKkNx5hdB8niSokV/resize:1250/format:jpeg"\
| jq .

More concisely, this sampled BRIT image corpus can be reference using a citation signature

hash://sha256/18b51a180c63929d5e3a50dbb72295579c2645546d22ae3fdcd5e2095c43d199 .

Image Origins

For this corpus, the following servers were queried for reported image urls:

```
$ preston ls --data-dir $PWD -l tsv | grep hasVersion | sed
's+https://++g' | cut -f1 | sed 's+/.*++g' | sort | uniq -c | sort -nr
596759 bisque.cyverse.org
220278 web.corral.tacc.utexas.edu
7537 api.idigbio.org
942 portal.torcherbaria.org
410 storage.idigbio.org
252 serneportal.org
30 static.inaturalist.org
10 urn:null
4 inaturalist-open-data.s3.amazonaws.com
```

Images Not Found

Preston reports non-responsive URLs as skolemized blanks see

<https://www.w3.org/TR/rdf11-concepts/#section-skolemization> .

Using this labeling of non-responsible image URLs, the following servers produced non-responsive urls:

```
$ preston ls -l tsv\
| grep hasVersion\
| grep ".well-known/genid"\
| sed 's+https://++g'\
| cut -f1\
| sed 's+/.*++g'\
| sort\
| uniq -c\
| sort -nr
98 web.corral.tacc.utexas.edu
55 bisque.cyverse.org
10 urn:null
3 portal.torcherbaria.org
```

156 image locations appeared to yield no content on tracking them a first time. (see [#Appendix-A] and [#1](#))

On retrying the inaccessible content locations, only 33 remained inaccessible (see [#Appendix-B]), hinting to intermittent and permanent access issues.

Data Transfer from Germany to US

The BRIT images were originally tracked from Germany on a commercial "off-the-shelf" server.

After receiving blank storage hardware by mail on 4 Sept 2022, the BRIT image corpus hash://sha256/76d40abccfc71bc2daf4ea4a6003b9ac49123b27abe9f0d81e233299baf5e94 was transferred from Germany to Minnesota, US on 5 Sept 2022 onto a USB 3.0 Seagate Expansion HDD 18TB STKP180000402 PN 3EGAPR-570 connected using a Lenovo T430 running Ubuntu Ubuntu 20.04.5 LTS using Intel® Core™ i5-3320M CPU @ 2.60GHz × 4 and 8GB of memory. The corpus spanned over 900k files / 309GB and was transferred in about 21h (see below for details) via a consumer grade fiber internet connection.

The total number of files in the received data directory was:

```
$ find . -type f | wc -l
902626
```

Also, the Rsync logs below captured the transfer statistics.

[...]

```
data/ff/ff/ffffe29becf0e65f3c32f9bb53f18f418fc0e6ff432ab1b2176bad560930be99
```

```
358,999 100% 2.18MB/s 0:00:00 (xfr#902621, to-chk=2/968416)

```

Local Verification and Duplication

After receiving the corpus in Minnesota, the content was duplicated locally to a WD Elements 5TB PN WDBU6Y0050BBK-XD. The rsync local replication took a little over an hour (~81 minutes), and the preston-based verification took under 7 hours (322 minutes). The verification checks the local copy and verifies whether the reference content is actually present and has the expected content. Content verification is a computationally heavy operation because hundreds of thousands of files are processed and their cryptographic hashes are re-computed. The verification reported no missing or altered content.

Transfer by USPS

To demonstrate that the image corpus can be transferred without using the internet, the Seagate Expansion HDD 18TB containing the BRIT image corpus copy was labeled and shipped by US Postal Service on 16 Sept 2022.

Conclusion

In period 2022-06/2022-07, images related to three herbarium collections managed by Botanical Research Institute of Texas spanned across primarily two resource locations: (1) bisque.cyverse.org and (2) web.corral.tacc.utexas.edu. The results show that the referenced specimen images were (mostly) successfully transferred (transfer A) in about 2 months at a sustained rate of about 1 image per 5 seconds. A similar transatlantic transfer (transfer B) of this image collection was performed using `rsync` in 21 hours, showing that transfer B was about 60x more efficient in transferring >800k images than transfer A. Repeating a similar transfer (transfer C) locally took a little over an hour, yielded another order of magnitude in transfer speed improvement, suggesting that the network, not local I/O nor computation, in transfer B was the primary bottleneck compared to transfer C.

Finally, the data was transferred on an external harddisk using the US Postal Service from Minnesota to Texas using Priority Mail (transfer D). Given that this transfer takes less than two months, this transfer will be faster than transfer A.

Discussion

The results suggest that (a) keeping local copy of an image corpus are expected to increase image access speeds by orders of magnitude, (b) BRIT current image access services are optimized for viewing individual images manually, (c) Preston can be used to make identical copies of image corpora of known provenance (or origin) while allowing for verification of the authenticity of the referenced image corpus, and (d) Preston can be used to securely cite a corpus of hundreds of thousands of images in a single line, or if needed, using a single QR code:

Botanical Research Institute Texas (BRIT): Origins of BRIT collection records and associated images tracked in period 2022-06/2022-07.

hash://sha256/76d40abccfc71bc2cdaf4ea4a6003b9ac49123b27abe9f0d81e233299baf5e9

<https://linker.bio/hash://sha256/76d40abccfc71bc2cdaf4ea4a6003b9ac49123b27abe>

Over the last decades, millions of dollars have been invested in digitizing existing collections. Now, readily available methods, like those implemented by rsync and Preston, may help unleash the full potential of this ever growing corpus of digital resources by increasing processing speeds of verifiable, and clonable, image corpora.
